

HP/Microsoft Frontline Partnership

A powerful e-mail solution for today's demanding business environment

At NWN Corporation, we know that many businesses are struggling with the growing challenges of online communications. Mobile workers expect to connect from anywhere, and access e-mail, voicemail, calendar and faxes. IT tries to protect vital e-mail from spam and viruses, while government regulations mandate security and retention.

How can you handle these challenges without spending more time on technology than on your business? Start by upgrading your business to Microsoft® Exchange Server 2007 on HP servers and storage solutions.

Microsoft Exchange Server 2007 on HP servers and storage solutions

Upgrading to Microsoft Exchange Server 2007 on HP ProLiant servers and BladeSystems and HP StorageWorks All-in-One storage is the simple solution for today's complex communications environment.

- **Anywhere access capabilities:** Mobile workers can be more productive from virtually anywhere, accessing e-mail, voicemail, calendar and faxes through a single inbox. Administrators can access and manage the e-mail server itself remotely.
- **Comprehensive protection and disaster recovery capabilities:** Maintain system integrity, protect intellectual property and help ensure the uninterrupted flow of e-mail and business. HP ProLiant servers are a reliable foundation for Exchange, with redundant and hot-plug components for continuous operations. New built-in compliance tools in Exchange Server 2007 simplify the process of meeting internal and regulatory requirements. Integrated data protection in HP StorageWorks storage systems protects critical e-mail, and optional storage mirroring enhances business continuity.
- **More efficient and cost-effective deployment:** Simplify the administration process and maximize the return on your hardware and networking investments with a native 64-bit support and cost-effective servers and storage from HP. Integrated management and remote operations raise operational efficiency to a whole new level.

The HP platform for Exchange Server 2007

Simplify and speed your Exchange Server 2007 upgrade with HP servers and storage—trusted, proven systems optimized for Exchange Server 2007.

- HP ProLiant DL320s Server series (250 users): affordable, high capacity servers with proven performance and optimal availability, leveraging dual-core processors.

Take the next step

For a risk-free assessment of your business messaging needs, please call any of our locations or e-mail NWNinfo@nwnit.com

NWN Corporation, a Microsoft Gold and HP Platinum partner, offers powerful solutions combining exception technology from Microsoft and HP together with our local support and business savvy. Your risk-free assessment will be conducted at your convenience. We will discuss your business needs and IT environment, and help you determine the optimal Exchange Server 2007 environment to meet those needs.
